

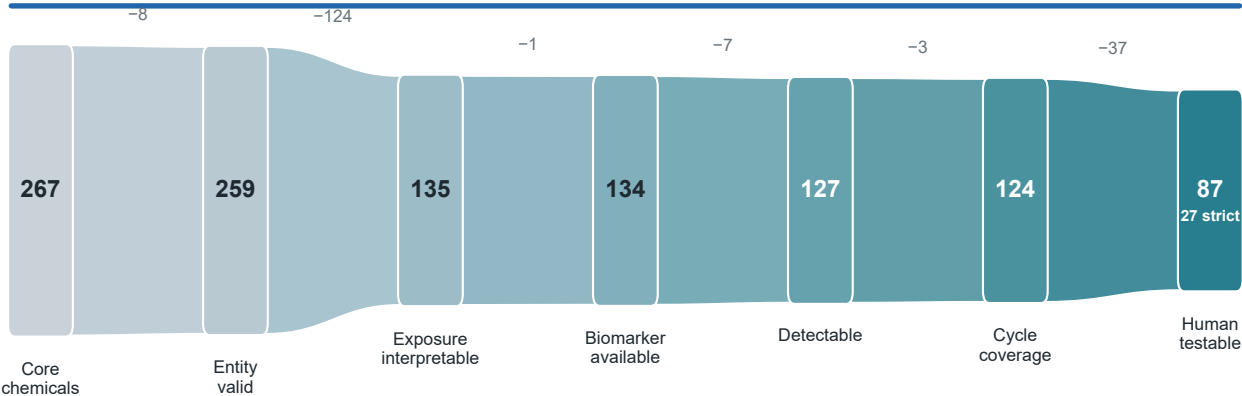

Figure 2 | Outcome-blinded actionability defines the human screening universe

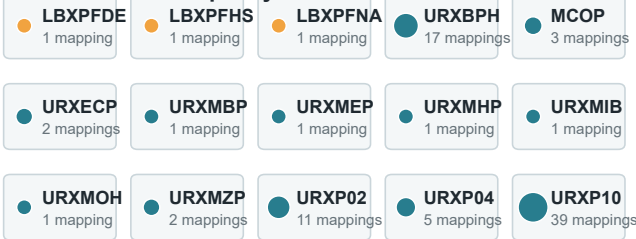

A Prespecified gates reduce 267 candidates to 87 testable mappings

CRC outcomes remain behind the firewall until 15 biomarker tests are frozen

87 eligible chemical–biomarker mappings corresponded to 15 unique NHANES biomarker tests

B The statistical multiplicity unit is the biomarker test

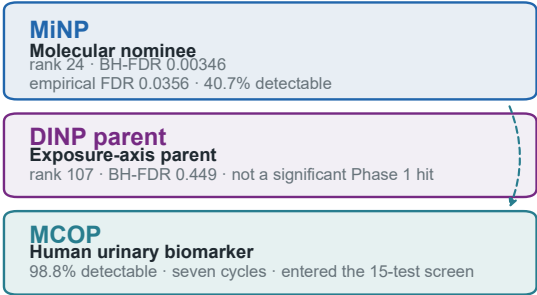

• urine

• serum/blood

15 tests = BH-FDR denominator

C DINP-axis translation preserves chemical identity

Distinct entities; no direct MCOP molecular-hit claim
